PROFESSIONAL SUMMARY

Software Developer with 2.3 years of experience building responsive and scalable web applications using React.js, JavaScript, and Node.js. Skilled in REST API integration, dashboard development, and modern UI frameworks. Experienced in delivering real-time solutions for IoT and management platforms. Passionate about creating high-performance and user-friendly applications.

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript, TypeScript, React.js, jQuery, AJAX, Bootstrap, Tailwind CSS

Backend: Node.js, JSON, REST API Development & Integration, Docker, Nginx

State Management & UI Libraries: Redux Toolkit, React Query, Chart.js, Material UI (MUI), Framer Motion

Database & Tools: Git, GitHub, MySQL

PROFESSIONAL EXPERIENCE

Web Developer — Real Tech GPS Pvt Ltd

05/2024 – Present | Perundurai

- Developed and maintained responsive, scalable web applications using React.js, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, and Tailwind CSS, delivering intuitive and user-friendly interfaces.
- Integrated REST APIs and collaborated with backend teams on Node.js services and MySQL database operations to build real-time, data-driven applications.
- Optimized application performance, ensured cross-browser compatibility, and supported deployment using Docker, Nginx, and Git within Agile development environments.

Verification Expert — Mahendra Next Wealth

03/2023 – 05/2024 | Namakkal

- Verified and validated government ID proofs and official documents to ensure accuracy and compliance.
- Maintained high levels of attention to detail and data accuracy while handling sensitive information.
- Collaborated with team members to meet daily verification targets within given timelines.

PROJECTS

i-Tank – IoT Water Level Monitoring System

- Developed an IoT-based water monitoring platform using **React, TypeScript, and Vite** for real-time tank level, motor status, and device monitoring.
- Integrated live IoT sensor data to display water levels, motor activity, consumption statistics, and device health with real-time dashboard updates.
- Designed responsive administrative dashboards using **Tailwind CSS** and **Material UI**, enabling efficient monitoring, filtering, and device management.
- Implemented data visualization using **Chart.js** to analyze water consumption trends, tank utilization, and operational performance.
- Improved water resource management through continuous monitoring, real-time alerts, and centralized analytics, helping reduce water wastage.

iGPS – Location-Based GPS Tracking Platform

- Developed a real-time GPS tracking web application using **React, TypeScript, and Vite** for location monitoring, trip history, and route visualization.
- Integrated **Google Maps API** to implement interactive maps with **geo-fencing**, route playback, markers, polylines, and location-based route spot management.
- Implemented efficient state management using **Redux Toolkit** and optimized API communication with **React Query** for seamless data synchronization and improved performance.
- Designed responsive user interfaces using **Tailwind CSS**, **Material UI**, and **TanStack React Table**, providing advanced filtering, search, and data management capabilities.
- Built analytics dashboards using **Chart.js** and implemented **PDF/Excel report generation** using **jsPDF** and **XLSX** for comprehensive reporting and data export.

EDUCATION

Bachelor of Engineering (BE)

08/2018 – 05/2021

Mahendra Engineering College, Namakkal | CGPA: 8.86
